

CUSTOMER SUCCESS AI LAB

A private, local-first platform for learning, building and operating responsible AI workflows

THE PURPOSE

Turn a modest T480 into a safe proving ground for Customer Success AI.

Experiment locally. Build reusable patterns.
Keep customer-facing decisions human-led.

THE PLATFORM

CORE CAPABILITIES

FLOW

n8n workflows

Automation, approvals, schedules and repeatable operational experiments.

DB

PostgreSQL + pgvector

Reusable customer context, structured data and vector search foundations.

AI

Local AI models

Ollama plus local embedding models for practical evaluation and experimentation.

GOV

Governed operations

Fixed adapter actions, approval gates, evidence, health checks and pinned images.

PRIVATE, RESILIENT, REPEATABLE

Private by design

n8n is loopback-only; the database stays inside Docker.

Recovery tested

Host-side backups and a synthetic restore drill are proven.

Hands-off restart

A boot-triggered S4U task starts WSL + services after reboot.

Upgrade discipline

Reviewed digests, backups and post-upgrade workflow checks.

THE CUSTOMER SUCCESS VALUE

Learn faster · Experiment safely · Build reusable AI workflows

A practical path from local prototypes to credible, governed Customer Success operating models.
