

CUSTOMER SUCCESS AI LAB

Private local AI infrastructure for building, evaluating and governing Customer Success workflows

THE MISSION

Turn a modest T480 into a safe, repeatable proving ground for Customer Success AI.

Experiment locally • keep decisions human-led

HOW THE PLATFORM FITS TOGETHER

CORE PLATFORM CAPABILITIES

FLOW

n8n workflow automation

Schedules, integrations, approvals and bounded tests.

DB

PostgreSQL + pgvector

Structured context, metadata and vector search.

AI

Ollama + embedding models

Local model and retrieval experiments on the T480.

SAFE

Private by design

Loopback n8n; database and models on the Docker network.

GOVERNED ADAPTERS — OPERATIONS WITH GUARDRAILS

Fixed named operations only: no free-form remote shell, no secrets in Git, explicit approval for changes.

T480 Control Adapter

WINDOWS + WSL

Health, Docker diagnostics, AC power policy, boot recovery, controlled reboot and maintenance checks.

Approval-gated: restart • startup task • power changes

n8n Workflow Adapter

WORKFLOWS

Health, list, inspect, import, activate and test bounded workflows through the local n8n API.

Approval-gated: import or activation of workflow changes

Postgres + pgvector Adapter

DATA LAYER

Readiness checks, vector probes, reviewed migrations and evidence-backed synthetic recovery exercises.

Approval-gated: applying a reviewed migration

Upgrade + Recovery Control

APPROVAL

Pinned images, pre-upgrade backup, health verification, synthetic workflow test, host-side backup and restore.

Never auto-upgrade; retain a reviewable decision trail

PROVEN OPERATING RHYTHM

1. INSPECT

Health + capacity

2. APPROVE

Bounded change

3. VERIFY

Service + workflow

4. RETAIN EVIDENCE

Bundles, hashes, milestone proof

LEARN FASTER • EXPERIMENT SAFELY • BUILD REUSABLE AI WORKFLOWS
